SUMMARY

Full-stack engineer with **2+ years of production experience** building web platforms, dashboards, automated workflows, and payment integrations using **React.js, TypeScript, Node.js, and Go (Golang)**. Comfortable using AI coding tools to ship faster and refactor codebases confidently. Strong track record of building end-to-end products — from backend APIs and webhook automation to admin dashboards and membership systems — in fast-paced startup environments.

WORK EXPERIENCE

Software Developer | SEORCE

Aug 2025 – Present

Tech Stack: Node.js, Express.js, React.js, TypeScript, MongoDB, AWS, Docker, CI/CD

- Built and maintained a **full-stack platform serving 3,000+ daily users** — Node.js + Express.js backend with React.js frontend, covering booking workflows, payment processing, and admin dashboards.
- Architected a **Gold Pass membership system** end-to-end — QR-based annual passes with PhonePe payment integration, visit tracking across two venues, referral engine, inventory management, and automated PDF ticket generation.
- Integrated **Razorpay and PhonePe payment gateways** end-to-end — webhook signature verification, idempotency handling, failure recovery mechanisms, and automated retry logic ensuring zero duplicate transactions in production.
- Built a **9-endpoint analytics backend** — campaign performance, revenue trends, referral attribution, UTM tracking, and daily booking reports for admin decision-making.
- Integrated **Cloudflare R2 + CDN, WhatsApp API, Nodemailer, Google Analytics, and GTM** — automated ticket delivery reducing processing time from **8s to under 2s**.
- Deployed on **GCP with CI/CD pipelines** — automated builds ensuring **99%+ uptime** and rapid deployment cycles.

Software Developer Intern | ParkSpot

Oct 2024 – Aug 2025

Tech Stack: Go (Golang), Vue.js, MySQL, GORM, REST APIs, Docker, Git

- Built production-grade **RESTful APIs in Go** for booking and payment workflows — improved average API response time by **~30%** through query optimization, indexing, and caching.
- Worked within a **large existing codebase** in Go — read, debugged, and refactored existing modules without breaking functionality, maintaining clean and maintainable code throughout.
- Led **Vue 2 to Vue 3** migration (Composition API) — improved frontend responsiveness by **25%**. Recognized as **Spotter of the Month** for outstanding contributions.
- Containerized services with **Docker** and collaborated on deployment workflows in Agile sprints.

PROJECTS

Funworld

Aug 2024 – Sep 2024

Full Stack — Payment Integration, Webhook Automation, Admin Dashboard

[Live Demo](#) | [GitHub](#)

Tech Stack: Node.js, TypeScript, Express.js, React.js, MongoDB, Razorpay, PhonePe, AWS, Docker

- Built a complete full-stack ticket booking platform from scratch — React.js frontend, Node.js + TypeScript backend, deployed on AWS with CI/CD pipelines.
- Integrated Razorpay and PhonePe payment gateways with webhook signature verification, idempotency keys, and retry logic — zero duplicate transactions in production.
- Implemented **JWT-based authentication with RBAC** — separate admin and user privilege layers across all API endpoints.
- Built a coupon validation engine supporting multiple promotional campaigns with backend rules for eligibility, expiry, and usage limits.

SecretSend

Sep 2024 – Oct 2024

Full Stack — Next.js, AI Integration, Authentication

[Live Demo](#) | [GitHub](#)

Tech Stack: Next.js, TypeScript, NextAuth, MongoDB, Gemini AI API, Resend, GCP

- Built a full-stack anonymous messaging platform with **Next.js** — SSR, API routes, dynamic routing, and protected pages with session-based JWT authentication using NextAuth.

- Integrated **Google Gemini AI API** for context-aware message suggestions — proper error handling, rate limiting, and retry logic.
- Optimized **MongoDB aggregation pipelines** for message retrieval — reduced average query execution time by ~**35%** through schema redesign and index optimization.
- Deployed on **GCP** with CI/CD pipelines — automated builds and zero-downtime deployments.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Go (Golang)
Frontend: React.js, Next.js (SSR, routing, API routes), Redux, Tailwind CSS, HTML5, CSS3
Backend & APIs: Node.js, Express.js, REST API Design, Webhooks, Background Jobs, JWT Auth, RBAC, Mongoose, GORM
Databases: MongoDB (Schema Design, Aggregation, Indexing), MySQL, PostgreSQL (basic), Redis (basic)
DevOps & Tools: Git, Docker, AWS, GCP, Vercel, CI/CD Pipelines, Postman
Concepts: System Design, Concurrency Handling, Idempotency, Payment Gateway Integration, Clean Code, Agile

EDUCATION

Sikkim Manipal University <i>Master of Computer Application</i>	Online (Distance Learning) <i>Aug 2025 – June 2027</i>
Jiwaji University <i>Bachelor of Computer Application</i>	Gwalior, M.P., India <i>July 2021 – June 2024</i>
